What can you spot?

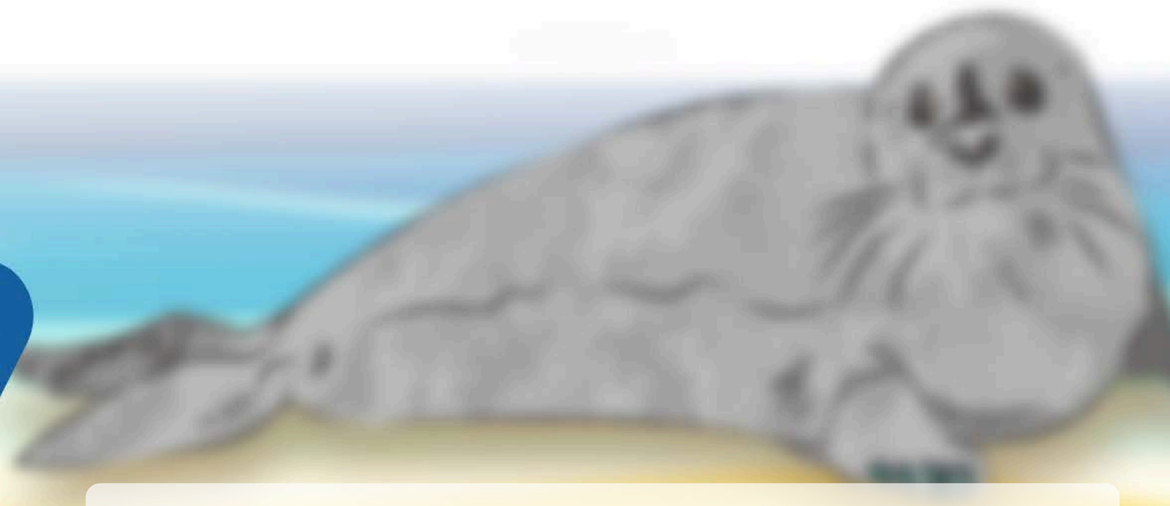
We've joined BIAZA Spotted on Site along with dozens of UK aquariums and zoos. It's a campaign to find and record native flora and fauna - from birches to bees. This has been contributing to thousands of records, benefitting science.

The data helps people to know what species call the zoo their home which in turn helps zoos to conserve their local species.

The best part? You can get involved too:

1. Search for and download [Seek] or [iNaturalist] on your Android or Apple device.
2. Use the app to photograph and record native life you see during your visit (not the aquarium animals!)
3. Any flora/fauna you log will automatically be added to this site's project page.

And that's it! You can check out every involved place and observation via the QR code below.



Spotted on Site webpage:

Your observations will join the SoS Autumn Bioblitz if taken between 14 - 20 October 2024!
