

Venomous Reptile Management Course

This training course is presented as a guideline to managing venomous reptiles, in zoological institutions, with a minimal contact approach. The course aims to provide institutions with knowledge and practical skills to safely manage venomous reptiles beyond routine maintenance. Modern management practises have been developed in accordance to current legislation

Topics covered

- Venomous reptile collection planning
- Facilities & housing for venomous reptiles
- Handling of venomous reptiles
- Venomous reptile working protocol
- Bite protocol and en-venomation first aid
- Anti-venom management

This course is held at your institution and can be tailored to your specific requirements.

In addition to the topics covered, on site working protocol development, emergency procedure development and enclosure design can be incorporated
